A positive twist on implant education

By Trinon Collegeium Practicum Staff

Continuing education in dental implantology has traditionally focused on theoretical aspects. Trinon Collegeium Practicum (TCP) challenges this training approach by offering practice-orientated dental implantology courses. The Q-Implant Marathon offers an engaging curriculum specializing in hands-on training, the company asserts.

Conventionally, entering the field of implantology has proven difficult for many dentists. Typically, it is not a subject of university education, with many universities and courses focusing largely on theoretical orientation. Because of this, establishing oneself within this particular area of dental medicine can prove to be a time-consuming endeavor. Further complicating the matter is the issue that educational and training programs rarely present an opportunity for practitioners to practice directly on patients.

Since 2003, the Q-Implant Marathon has offered hands-on training that incorporates a live patient model. Participants spend five days assisting and leading surgeries under the supervision of TCP’s experienced surgical team. The Academy of General Dentistry accredits the Q-Implant Marathon, and all participants are eligible to receive 60 continuing-education credit hours.

The Q-Implant Marathon offers three levels of training on the basis of practitioner experience:

• Level 1: Participants lead the placement of 30 implants, while assisting on dozens more.
• Level 2: Participants perform five sinus lifts and learn foundational bone-splitting techniques.
• Level 3: Participants learn advanced grafting techniques, such as ramus and chin block grafts and titanium mesh reconstruction.
