Experts discuss future of implants in Gothenburg

By Daniel Zimmermann, DTI Group Editor

Professor Per-Ingvar Brånemark of Sweden has urged dentists worldwide to refocus on their patients' needs.

Despite all recent developments in oral and maxillofacial reconstruction, he told Dental Tribune during an exclusive interview at the first P.I. Brånemark Symposium in Gothenburg this month.

Eighty-year old Brånemark was the first clinician to place a modern dental implant back in 1965. He also discovered the concept of osseointegration, which had a huge impact on oral rehabilitation and other clinical disciplines such as orthopedics.

The P.I. Brånemark Symposium, which is supported by Nobel Biocare, is supposed to be the first in a number of interdisciplinary events that focuses on issues such as the quality of life, economics and ethics in regard to oral rehabilitation.

It drew more than 250 international scientist and dental experts to Gothenburg in order to meet and discuss the latest concepts and developments in oral and maxillo-facial reconstruction including the latest advancements in implant surfaces and bone augmentation, as well as imaging and CAD/CAM-based pros.

Implant specialists offer tips in New York

By Sierra Rendon, Managing Editor

The Greater New York Dental Meeting (GNYDM) is traditionally an event where the most up-to-date techniques are taught and discussed, and this was no different in 2009.

Implants were a hot topic at the event, which took place Nov. 29–Dec. 3. Here is a sampling of the many GNYDM speakers and topics that involved implants:

• “You’ve Taken Implant Training ... What Do You Do Next?,” by Lynn D. Mortilla, which discussed integrating implants into your practice.

• “Immediate Tooth Replacement in the Esthetic Zone,” Dr. Barry Levin, which showed that the time frame of three to six months of unloaded healing is not always mandatory any longer. He explained how immediate temporization can give the patient an immediate sense of security and esthetics.

• “My First Esthetic Implant Case — Why, How & When?,” by Dr. Markus Steigmann, explained that success from the esthetic aspect requires bone height and width, soft-tissue architecture and prosthetic restorations close to nature.

• “Mini Dental Implants to Retain Lower Dentures,” by Dr. Bruce Lish, which showed how mini dental implants can be used to help retain and stabilize a complete lower denture.
The meeting also presented new studies revealing promising satisfaction figures among patients who received treatment with dental implants. “Osseointegration has been the major breakthrough in 20th century oral rehabilitation and brought together clinicians from different disciplines who otherwise may not have met,” said Dr. Daniel van Steenberghe of Belgium, scientific chairman of the symposium. “The purpose of this meeting is to enhance this cooperation for the sake of the patient.”

According to the latest industry figures, the worldwide market volume for dental implants was $700 million in 2008, making it the fastest growing business sector in dentistry. According to industry experts, this volume is expected to increase further due to lower delivery costs and better long-term clinical results.
A Bone Matrix Product Containing Stem Cells.

The Properties of Autograft without Associated Risks
The proprietary processing technology that produces Osteocel® results in a viable bone matrix product that preserves the native stem cells found in marrow-rich bone. It is the only product available today that has the desired beneficial properties of autograft - osteoconduction, osteoinduction and osteogenesis - and that allows surgeons to provide their patients with optimal bone growth conditions without the added risk and cost of a secondary procedure.

Low Immunogenicity
Mesenchymal stem cells are IMMUNE-PRIVILEGED cells that do not stimulate a cellular immune response. Osteocel does not activate T cell proliferation, as shown in vitro from Allogeneic Lymphocyte Reaction (MLR) testing.

Histologic Evidence
Positive clinical use of Osteocel since 2005 demonstrates bone-forming ability. Histology from a human sinus augmentation study using Osteocel shows substantial vital bone content at 16 weeks, with very low residual graft material.

Bone Formation
Stem cells contained in Osteocel are capable of differentiating into bone cells. Every lot of Osteocel is tested for bone forming potential.

Viable Cell Content
The osteogenic potential arises from the stem cells in Osteocel. Following processing of marrow-rich bone, release testing demonstrates osteogenic potential according to the following criteria:
- Rich supply of stem cells: Greater than 50,000 cells/cc
- Viability: Greater than 70% cell viability
- Positive osteogenesis: In vitro cell culture assay

An Evening Lecture Series

January 14th • New York City
January 27th • Palo Alto, CA
February 4th • Iselin, NJ
February 11th • Cleveland, OH
March 1st • Fort Lauderdale, FL

Introducing

The LVI Stratos® System

The LVI Stratos® Occlusal Plane Analyzer accurately transfers orientation of the maxillary arch in relation to the long axis of the body to the Stratos articulator.

LVI Occlusal Analyzer

- Simple to use
- Adjustable hamular support
- Reproducible mounting technique
- Uses anatomic landmarks not variable soft tissue landmarks
- Fixed incisive papilla pin centers the model

LVI Calibrated Stratos® 100

Based on average anatomic values, the Stratos 100 utilizes fixed 30 degree protrusive and 15 degree bennett angles.

- Stable Easy access design
- Accepts H.I.P mounting accessory
- LVI exclusive calibration
- Magnetic Mounting System eliminates the need to send the articulator to the lab

SYSTEM PRICE

$1,295.00

Includes carry case, LVI Calibrated Stratos 100, and LVI Occlusal Analyzer

Osteogenics event back in Scottsdale

2010 Global Bone Grafting Symposium will feature world-renowned speakers

Osteogenics Clinical Education, a division of Osteogenics Biomedical, has announced dates for its 2010 Global Bone Grafting Symposium.

The symposium will be held March 26 and 27 at the Westin Kierland Resort & Spa in Scottsdale, Ariz.

Led by keynote speaker Dr. Michael Pikos, the symposium will feature presentations from world-renowned speakers in dental bone grafting, including Drs. Dexter Barber, Suzanne Caudry, Daniel Cul lum, Andreas Siebold, Hom-Lay Wang and Thomas Wilson, Jr.

Approximately 300 clinicians from around the world are expected to attend the symposium. This will mark the second consecutive year Osteogenics Clinical Education has hosted the symposium in Scottsdale.

“Based on last year’s overwhelmingly positive attendee feedback, this educational format of having keynote speakers, case presentations and a hands-on workshop is very effective,” said company president Shane Shuttlesworth.

“Once again, we’re honored to have such a talented and experienced group of lecturers, and we know that attendees will be very pleased with this program.”

The 2010 symposium will focus on treatment planning routine and complex bone-grafting cases in an environment conducive to group learning. Attending clinicians will be able to actively participate in the symposium through interactive treatment planning sessions and a hands-on ridge augmentation workshop.

“Comprehensive diagnosis and treatment planning is the cornerstone of all that we do in dentistry,” Pikos said. “While there can be more than one treatment plan for a given case, there is but one diagnosis, and cone-beam CT has had a dramatic impact on this critical process, both in my private practice and with the Pikos Implant Institute.”

The Westin Kierland Resort & Spa was chosen due to the mild weather the Scottsdale area receives in the springtime and for the resort’s amenities.

The resort offers 27 holes of championship golf, a 9,000-square-foot water park and a world-class spa. The resort is also within walking distance to Kierland Commons, a 58-acre upscale shopping and dining complex.

For more information, including registration and additional hotel information, visit www.osteogenics.com/courses, or call (888) 796-1923.

Tuition is $695 for clinicians and $250 for assistants and office personnel. Attending clinicians are eligible for up to 14 C.E. credits. Registration ends Feb. 26.

GoDirect™
One-Piece Implant with
“Locator® Compatible Platform
All-in-One packaging includes
Snap-on Transfer and Comfort Cap
USA List Price = $150

1-PIECE IMPLANT DESIGN FEATURES
1. Platform: Matches Zest Locator® Abutment
2. Body: Tapered with self-tapping cutting grooves
3. Surface: Medium Rough Texture - SBM 17 year history
4. Lengths: 10mm, 11.5mm & 13mm
5. Diameters: 3.0mmD, 3.7mmD & 4.7mmD
6. Collar Height: 1.5mm & 3.0mm

*Snap-on Comfort Cap Included
*Snap-on Transfer Included
*Zest Locator Male Attachment Not Included

“Order Online for High Quality Products at factory-direct prices”

Gerald Nienick, DMD,MS, Founder and President of Implant Direct

*“Locator® is a registered Trademark of Zest Anchor Company
LEGACY SIMPLY SMARTER

- Tapered, self-tapping with micro-threads
- Compatible with Zimmer’s Screw-Vent implant
- Color coded hex/bevel conical connection
- Platform switching interface (excluding 5.7mmD)
- More diameter options including 3.2mmD & 5.2mmD
- All-in-One Packaging for added value.

Three Implant Designs and Packaging Options

Original Conical Connection (GNizznick US Pat. #4,960,381)
Selection As Simple as 1-2-3

Select Implant based on Price, Packaging and Thread Design

Legacy1: $125 includes Healing Collar
Legacy2: $150 includes Healing Collar & Transfer
Legacy3: $175 includes Healing Collar, Transfer & Abutment

Legacy™3’s All-in-1 Packaging

INCLUDES: Cover Screw, Healing Collar, Transfer & Straight Preaparable Abutment
Surgically and Prosthetically Compatible with Zimmer’s Tapered Screw-Vent®
Legacy3 USA price = $175

* Tapered Screw-Vent USA price = $563
  * Includes similar components provided with Legacy3 Implant

Building an implant business

By Roger P. Levin, DDS

Implant practices are a very diverse group. Many practices “dabble” in implants. Some are more involved but don’t place nearly as many implants as they desire. A select few become purely implant practices.

Although not every clinician wants an implant-only practice, most would love to place more. The best way to do that is examine the behavior of highly successful implant practices to see how they got that way.

Three key habits of highly successful implant practices

During the last two decades, Levin Group has consulted to many high-end implant practices and guided them to achieve their goals. These Levin practices have the following characteristics in common.

1) Everyone on the staff is well-versed in the benefits of implant dentistry. In many practices, it is only the clinician and/or an implant treatment coordinator who have a complete understanding of how to discuss implants with patients. What is rarely recognized is that other staff members are asked by patients for their opinions. This means that patients are generally seeking validation from other sources before making a decision.

2) All patients are educated about dental implants. There should be a clear set of systems, procedures and scripts to ensure that patients understand all of the benefits of dental implants. Even if patients don’t need dental implants yet, remember that they have family members, friends, co-workers and acquaintances that may.

3) All Levin practices employ an implant treatment coordinator (ITC) once they reach approximately 250 implants per year. Levin Group has found that very few clinicians are able to exceed the 250–300 implant per year range (in group practices this means per clinician) without an ITC. We have found that training an implant treatment coordinator leads to a 30 to 33 percent increase in implant practice production.

Conclusion

Dental implants will change dramatically over the next few years. There will be more competition as more general dentists become involved. We will see breakthroughs in technology and even the expansion of large implant surgery centers. Stay competitive by taking the steps outlined above and enjoy sustained implant growth over the life of your practice!

Trying to decide where to take the implant side of your practice? Zimmer Dental to distribute ERA mini implant by Sterngold

New agreement is exclusive

Zimmer Dental, a leading provider of dental oral rehabilitation products and a subsidiary of Zimmer Holdings, is pleased to announce its exclusive distribution of the ERA® Mini Dental Implant System, manufactured by Sterngold Dental.

The tried-and-true ERA Mini Implant System is an industry leader in implant-based denture stabilization — a procedure that can markedly enhance a patient’s quality of life.

The versatile ERA Mini Dental Implant System enables the transitional function of a denture during the osseointegration of traditional implants, as well as long-term, affordable, chairside denture stabilization as little as one visit.

This multi-dimensional system comprises the ERA Mini Implant, surgical instrumentation and prosthetic components, including the unique angulation-correcting, vertically-resilient properties of the widely used ERA attachment.

Using the ERA Mini Dental Implant System to stabilize an unsecured prothesis can dramatically improve a patient’s quality of life — enabling proper chewing and speaking, increasing comfort and self-confidence, and fostering the consumption of a wider variety of foods.

“This distribution agreement reinforces Zimmer Dental’s commitment to providing a comprehensive product portfolio, outstanding value and versatility, and successful patient outcomes,” said Zimmer Dental President Harold C. Flynn, Jr.

“While traditional implants and regenerative materials remain the core focus of our business, we recognize that implant stabilization is the best option for unsecured prostheses, and strive to bring this treatment modality to patients who have not yet had this life-improving procedure.”

For decades, Zimmer Dental has gained the trust of thousands of clinicians worldwide who count on its comprehensive line of scientifically-proven products to deliver successful patient outcomes and the best value in the industry.

Contact a Zimmer Dental sales consultant or customer service at (800) 854-7019, (760) 928-4500 (for outside the U.S.) or visit www.zimmerdental.com for more information.
