Vitala™, the latest GTR barrier membrane product from Osteogenics Biomedical, is now available in the United States.

Vitala, a porcine-derived collagen membrane, features the advanced handling characteristics of a soft, supple, flexible and adaptable membrane with superior tensile strength. Vitala is a natural porcine collagen membrane manufactured using a proprietary decellularization protocol designed to maintain the natural, microporous, three-layered architecture of the tissue.

Vitala is biologically cross-linked, eliminating the need for cross-linking chemicals and agents. Vitala is now available for purchase and is offered in four sizes to tailor to a variety of defects. In addition to Vitala, Osteogenics offers a complete line of dental bone-grafting products.

Consult-PRO: the world’s choice for implant education and documentation

A case presentation tool that accurately represents the quality work the dentist performs is something both patient and dentist need and deserve.

Consult-PRO is the world’s foremost dental education software company, specializing in 3-D animated dental education and total practice solutions. Since 1999, Consult-PRO has provided the most comprehensive dental patient-education presentations in the industry, covering all aspects of dentistry with a particular concentration on implants, oral surgery and periodontics.

Technology leaders
With Consult-PRO Single, Consult-PRO Network, Consult-PRO Weblink and the new Consult-PRO CLOUD and Consult-PRO Mobile, the company combines the emerging dental techniques and emerging computer technology for the benefit of the patient, the dentist and the dental institution.

Consult-PRO creates 30 new presentations every year. These presentations are based on new surgical techniques, new manufacturer technologies and new research developments in dentistry.

This dedication to continuous development has led to the relevance and vast number of Consult-PRO topics covered.

The newest Consult-PRO CLOUD and Consult-PRO Mobile platforms highlight the company’s commitment to staying on the cutting edge of emerging technology.

The addition of Consult-PRO CLOUD and Mobile give the dentist more choices for how to utilize the software. From the office to the home, across a multi-office organization or in a university with thousands of students, Consult-PRO is...
truly the modern dental education solution.

A common knowledge for dentistry: across the world

Working with dental specialists and native voice talents from each country Consult-PRO has currently translated its groundbreaking software into more than 20 languages.

The globalization of dentistry has granted clinicians and patients from different regions of the world the benefit and expertise of global dental knowledge, creating a community of shared information. Consult-PRO is a major supporter of and vehicle for that knowledge exchange.

By providing the most up-to-date dental techniques and 3-D animated technology in the language of each user, Consult-PRO is contributing to the development of a common knowledge for dentistry.

Consult-PRO is currently working with many universities and organizations around the world to help foster the development of this common dental knowledge.

The relationship with the European Federation of Periodontology, www.efp.net, is the most recent example of Consult-PRO’s commitment to worldwide patient and clinician education.

True informed consent

The governing bodies of dentistry are requiring more and more documentation. Was the patient provided with data to make an informed decision?

Documenting informed consent or informed refusal is about protecting the dental professional and the dental patient. Proper documentation is paramount to the success of any modern dental practice. Consult-PRO has developed the complete informed consent solution.

• Show 3-D consequences of non-treatment, different treatment options and various complications associated with different procedures.
• Automatically document the exact date and time those procedures were shown to a particular patient.
• Add notes in WordPad about what was specifically discussed with the patient.
• Print brochures highlighting the details of the presentations shown and automatically document that they were printed and given to the patient.
• E-mail 3-D presentations to the patient for him or her to watch at home with other family members or decision makers and document that you e-mailed those presentations.
• Automatically document when the presentations were watched by the patient at home.

Consult-PRO also gives you the ability to have the patient digitally sign to confirm that he or she has seen and understood everything that has been explained.

We are living in a litigious society; we owe it to ourselves and our patients to ensure we are protected.

Team building

Consult-PRO isn’t just for the patient. It’s a team-building tool for the entire staff. Associates, hygienists, office managers and any other staff members can understand the common dental goals. The software also tracks which staff member showed or e-mailed which presentation to which patient. Consult-PRO helps make sure everyone in the dental office is delivering a clear and consistent message to the patient.

For more information or a demonstration, call (800) 519-6569 (North America) or 001 (416) 429-6545 (international) or visit www.consult-pro.com.
